

Electrical Feed Systems

Pacific Hoists have a range of systems for supplying power to travelling hoists, cranes, and all machinery on the move.

AKAPP Multi Conductor enclosed PVC Conductor Rail System

Accepts seven conductors in continuous lengths up to 300 metres. Absence of joints reduce arcing and contact. Suitable for both indoor and outdoor use.

Flatrom Cable Festoon System

Designed to support one or more flatrom cables of various sizes. The enclosed track provides sag free support of power and pendant cables.

Roller Hanger System

An economically priced system, the hangers accept round form cable and operate along a fixed wire. Very simple to install and requires minimal maintenance. Maximum 20 metre run.

Zeca Cable Reels

These light weight electric cable reels provide a safe and economical method of supplying power to moving machinery. Designed for indoor and outdoor installation, the reels are spring loaded allowing the cable to be pulled out and automatically recovered as the machine moves back and forwards. Minimal assembly required and a range of cable lengths available.
